HSE CONTRACTOR ACADEMY

SHAPING THE **WORKFORCE** OF TOMORROW

أكاديمية أدنوك الفنية
ADNOC Technical Academy

OVERVIEW

The HSE Contractor Academy has been established to provide HSE training courses that develop skills, knowledge, and competencies for working in oil and gas industry. It ensures training is standardized, consistent, and meets ADNOC and international standards.

For further enquiries or if you would like to register for HSE training please contact the below mentioned:

hsecontractoracademy.hq@adnoc.ae

ABOUT ADNOC TECHNICAL ACADEMY

VISION

To be the leading provider of certified industrial training of the energy and manufacturing sectors in the UAE and the region.

MISSION

We are committed to drive excellence in developing world-class specialized workforce for the preferred employer of choice to the industry's sustainable growth. We inspire learners to pursue competency acquisition leading to shared prosperity of the community and beyond.

HSE CONTRACTOR ACADEMY

VALUE

We are fully committed to providing qualified and competent learners who can carry out their jobs with the highest standards of safety. We utilize our experience, knowledge, and expertise to deliver quality training, that meets ADNOC and international standards.

OBJECTIVE

- To ensure learners are competent, and able to perform with the highest standards of safety.
- To ensure learners understand the UAE culture, ADNOC values, UAE labor rights, and legal requirements.
- To satisfy the end-users' needs with high quality and world-class output.

HSE INDUCTION & REQUIRED TRAININGS FOR ADNOC SITE ACCESS

COURSE 1A

ONSHORE HSE INDUCTION + ADNOC LIFE SAVING RULES

The Onshore HSE Induction course is conducted to welcome new workforce members to their organization and prepare them for their new roles working onshore. It ensures workers are informed about **UAE culture, ADNOC Values, and UAE Labor Rights**. Learners will be made aware of the organization, workplace hazards and relevant HSE rules. This course serves as a starting point for an organization to introduce the culture of safety.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Comply with UAE culture, ADNOC Values, and UAE Labor Rights
- Adhere to ADNOC HSE Policy and the HSE management system
- Adhere to the ADNOC Group HSE Recognition & Accountability Framework
- Identify workplace hazards and apply control measures
- Follow ADNOC Life Saving Rules
- Show awareness of the ADNOC Work Management System
- Understand Safe System of Work arrangements (Reporting an incident, PPE, Facial Hair Policy)
- Understand Emergency Response Requirement
- Follow environmental protection requirements
- Follow industrial hygiene requirements
- Adhere to do's and don'ts in the workplace

TARGET AUDIENCE

Onshore HSE Induction and ADNOC LSR is mandatory for anyone who is going to work at ADNOC onshore sites. A more specific HSE Induction will be conducted at the specific ADNOC Sites.

ACCREDITING BODY

ADNOC

DURATION

0.5 day

CERTIFICATION VALIDITY

2 years

COURSE 1B

OFFSHORE HSE INDUCTION + ADNOC LIFE SAVING RULES

The Offshore HSE Induction is conducted to welcome new workforce members to their organization and prepare them for their new roles working offshore. It ensures workers are informed about **UAE culture, ADNOC Values, and UAE Labor Rights**. Learners will be made aware of the organization, workplace hazards and relevant HSE rules. This course serves as a starting point for an organization to introduce the culture of safety.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Comply with UAE culture, ADNOC Values, and UAE Labor Rights
- Adhere to ADNOC Offshore operations overview and HSE policy
- Utilize essential information for travelling offshore
- Follow ANOC Life Saving Rules
- Work as per ADNOC Offshore Safe Working Systems
- Identify principal hazards, and respond to them
- Follow emergency evacuation procedures

TARGET AUDIENCE

Offshore HSE Induction and ADNOC LSR are mandatory to work on ADNOC offshore sites. Specific HSE Induction will be conducted at specific ADNOC Sites.

ACCREDITING BODY

ADNOC

DURATION

0.5 day

CERTIFICATION VALIDITY

2 years

COURSE 2

H₂S TRAINING LEVEL 1

H₂S (Hydrogen Sulphide) Training Level 1 is designed for workforce personnel who are engaged in operations where there is a potential risk of H₂S. This gas is highly toxic and fatal even at low concentrations. It is flammable and therefore, is a potential fire hazard. This course ensures learners will have a better understanding about relevant hazards and properties. They will be able to identify this hazard and take the appropriate safety and emergency actions.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Identify H₂S hazard and properties
- Explain information related to H₂S detection and respiratory protection equipment
- Understand the H₂S zone classification and requirements
- Practice emergency actions and detection
- Practice EBA, Cascade System

TARGET AUDIENCE

H₂S Level 1 Training is mandatory for all professionals who access sites that may have H₂S hazards, including temporary workers and visitors.

ACCREDITING BODY

ADNOC

DURATION

0.5 day

CERTIFICATION VALIDITY

2 years

[Return to Course Summary](#)

COURSE 3

H₂S TRAINING LEVEL 2

This gas is highly toxic and fatal even at low concentrations. It is flammable, and therefore is a potential fire hazard. This course aims to ensure learners gain the knowledge and understanding about H₂S hazards & properties and the emergency actions that should be taken. The H₂S (Hydrogen Sulfide) Training Level 2 course is designed for workforce personnel who are likely to be exposed to H₂S. It ensures learners will have a better understanding about hazards and properties of H₂S. They will be able to identify and take appropriate safety and emergency actions.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Identify H₂S hazards and properties
- Explain information related to detection and respiratory protection equipment
- Understand the H₂S zone classification and requirements
- Show more understanding about operational controls of Red Zone
- Practice emergency actions, detection, and escape equipment
- Practice EBA, Cascade system and SCBA

TARGET AUDIENCE

ADNOC employees & contractors, who access Red, Amber or Yellow Zones, or work under ADNOC PTW, inside or outside the plant.

ACCREDITING BODY

ADNOC

DURATION

0.5 day

CERTIFICATION VALIDITY

2 years

[Return to Course Summary](#)

COURSE 4

BASIC H₂S TRAINING

The Basic H₂S Training provides knowledge and skills to ensure that the delegate gains the required understanding of the hazards and properties of H₂S, and appropriate emergency response actions to take in case an H₂S related incident arises.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Basic information of H₂S, Properties and Characteristics of H₂S
- Occupational exposure limits to H₂S
- Factors affecting individual susceptibility to H₂S
- Types of detector equipment
- Types of respiratory equipment
- Pre-use checks of personal detection devices and EBA

DEMONSTRATE:

- Operating personal H₂S detection equipment (including checks)
- Responding to an alarm
- Donning and operating (including checks) an EBA with a mask and within 30 seconds
- Donning and operating (including checks) an EBA with a hood within 30 seconds
- Connecting to a pressurized Cascade Breathing System with an EBA
- Disconnecting from a pressurized Cascade Breathing System with an EBA

TARGET AUDIENCE

Personnel that are, or could be, working in an environment that could become contaminated by H₂S gas.

ACCREDITING BODY

OPITO

DURATION

0.5 day

CERTIFICATION VALIDITY

COURSE 5

T-BOSIET/T-HUET

This OPITO approved course provides a range of knowledge and skills relevant to offshore working and travelling offshore by helicopter. It aims to introduce specific safety issues and regimes relevant to offshore and equip learners with basic emergency response knowledge and skills.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Identify hazards, assess risks and how to control them
- Identify safety regulations and explain the basic safety management concepts.
- Demonstrate, in a simulated environment, how to handle helicopter emergencies
- Demonstrate sea survival and first-aid techniques.
- Demonstrate firefighting equipment, and practice self-rescue techniques.
- Explain PPE requirements for working on an offshore installation
- Wear an aviation transit suit, aviation lifejacket and EBS

TARGET AUDIENCE

All personnel working in the Offshore Industry

ACCREDITING BODY

OPITO

DURATION

3 days

CERTIFICATION VALIDITY

4 years

[Return to Course Summary](#)

COURSE 6

BASIC FIRST AID

Thousands of people die or are seriously injured in workplace incidents. Many serious injuries and deaths could be prevented if first aid is given before emergency services arrive. It is possible that up to 1 out of 7 workers dies in incidents. Therefore, there is a real need for trained people to provide first aid. It covers the fundamentals of first aid that can help save lives, prevent, or relieve injuries and increase chances of recovery.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Carry out cardiopulmonary resuscitation (CPR) using an Automated External Defibrillator.
- Carry out First Aid to a choking adult.
- Carry out First Aid to a wounded or a bleeding adult.
- Carry out First Aid to an adult who is suffering from a shock.
- Carry out First Aid for minor cuts, bruises, burns, scalds, and splinters

TARGET AUDIENCE

ADNOC & contractor employees, by the UAE Labor Law and ADNOC HSE Standards.

ACCREDITING BODY

Red Cross, Red Cross and St. Andrews Approved

DURATION

0.5 day

CERTIFICATION VALIDITY

2 years

COURSE 7

BASIC FIRE FIGHTING

This course is designed for workforce who may face a firefighting hazard. It provides basic principles of fire, and actions upon discovering a fire. It covers types of fire extinguishers and their operation including the use of fire blankets and hose reels.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Recognize factors that cause a fire
- Define fuel, flash point, and ignition temperature
- Explain transmission of heat
- Understand the methods of extinction
- Use different types of portable fire extinguishers
- Identify fire causes and preventive measures
- Use basic firefighting equipment

TARGET AUDIENCE

Basic Fire Fighting is designed for workforce who could face a fire situation in offices or sites.

COURSE 8

CONTRACTOR PERFORMANCE MANAGEMENT

This course provides the requirements for HSE management in contracts. Learners will identify and describe the activities associated with the management of contractor prior to and after contract award. It covers mandatory requirements and guidance for implementation at each contracting phase.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Review scopes of work and identify HSE requirements
- Prepare projects and select contractors
- Assess risk of work to be carried out
- Develop a strategy for proactive management of Contractor HSE
- Evaluate contractor's HSE systems
- Understand the need for reporting and coordination
- Monitor and review a contractor's HSE performance and implement improvements
- Define client/contractor agreements and documentation
- Produce a client/contractor HSE Project Plan
- Supervise contractors' operations on day-to-day basis

TARGET AUDIENCE

Contract Administrators and Contractor personnel tasked with planning HSE requirements in contracts, tender preparation and evaluation. Also, contract award and subsequent Contractor management, Senior HSE and Procurement personnel.

COURSE 9

HUMAN PERFORMANCE

Human error is often identified as the cause of many accidents. In this course, learners will gain an understanding of human performance (HP) and its critical role for effective safety management and incident investigation. They will discover the five critical principles of human performance and learn to identify and differentiate between latent conditions and active triggers.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand what human factors are and how they affect human performance, health and safety
- Understand management of human factors including the scope and involvement of different parties
- Develop knowledge about topic areas related to major accidents and how to reduce related risks
- Understand and gain practical use of common tools and techniques used within human factors
- Understand how to apply certain human factors tools

TARGET AUDIENCE

This course is designed for safety managers, operational managers, safety engineers chemical/process engineers and human resources managers across all industries who are seeking a better understanding of the role of human error in safety.

COURSE 10

NEBOSH HSE INTRODUCTION TO INCIDENT INVESTIGATION

This course provides a range of knowledge and skills on how non-complex incidents can be investigated effectively. It focuses on learning lessons and making improvements so organizations can avoid similar incidents in the future.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Independently investigate simple incidents
- Understand why incident investigations are carried out and how human and organisational factors contribute to incidents
- Gather evidence including conducting witness interviews
- Produce an action plan to prevent a recurrence of an incident
- Contribute to team investigations for large scale incidents
- Positively impact the safety culture in your organization

TARGET AUDIENCE

This qualification is for anyone who wants to carry out incident investigations effectively. Employers, supervisors, HSE champions, union and safety representatives.

COURSE 11

NEBOSH CERTIFICATE IN HEALTH & SAFETY LEADERSHIP EXCELLENCE

The NEBOSH HSE Certificate in Health and Safety Leadership Excellence is interactive and thought provoking. This course covers the moral, legal and financial reasons for good health and safety leadership and offers guidance on the key areas to focus on to achieve it. It helps learners to become better influencers of health and safety in their business.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Become a great leader in health and safety management
- Enhance Cognitive ability (IQ) and Emotional Intelligence (EI) abilities
- Learn heart and mind philosophy strategies
- Influence your organization to adopt a culture of safety
- Initiate and support continuous improvement and innovation
- Understand the moral, legal and financial reasons for good health and safety leadership
- Understand the different leadership styles

TARGET AUDIENCE

This qualification is for senior business leaders or anyone who aspires to this role in the future.

COURSE 12

PROCESS SAFETY AWARENESS/NEBOSH PSM

The NEBOSH HSE Certificate in process safety management is designed to provide a sound breadth of knowledge that will allow you to contribute to the effective management of process safety risks. This course provides the knowledge and understanding of process safety management to ensure that they can contribute to the effective management of process safety risks.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Establish process management systems
- Explain asset management and maintenance strategies
- Carry out safe start-up and shutdown of process plant
- Demonstrate performance standards for safety critical systems and equipment
- Identify hazards and controls for:
 - Chemical reactions
 - Bulk storage of dangerous substances
 - Fire and explosion
- Initiate purpose and features of emergency plans

TARGET AUDIENCE

This course is suitable for managers, supervisors, employee representatives, safety representatives, newly qualified health and safety advisors within oil and gas industry.

ACCREDITING BODY

COURSE 13

ISO 45001 LEAD AUDITOR

This course provides the knowledge and skills required to perform first, second and third-party audits of occupational health and safety management systems against ISO 45001, in accordance with ISO 19011 and ISO/IEC 17021, as applicable. It helps to improve basic knowledge of the concepts of occupational health, safety management, and understand occupational health and safety management terms and definitions, used by the ISO 45001 standard.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Explain the purpose , content and interrelationship of ISO45001 and ISO19011
- Interpret requirements of ISO 45001 in the context of an audit
- Describe the roles and responsibilities of OH&S auditors and lead auditors
- Plan and conduct ISO 45001 audit in accordance with ISO 19011
- Report the audit, and undertake audit follow-up activities

TARGET AUDIENCE

HSE personnel and those who are involved in ISO 45001 assessments such as management representatives, environmental managers, engineers, and consultants. Also, those who want to become auditors and responsible for OH&S internal audit function.

ACCREDITING BODY

ISO/IRCA

DURATION

COURSE 14

ISO 14001 LEAD AUDITOR

This course provides the knowledge and skills required to perform first, second and third-party audits of occupational health and safety management systems against ISO 14001, in accordance with ISO 19011 and ISO/IEC 17021, as applicable.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand and explain the benefits of environmental management.
- Provide an understanding and interpretation of the ISO 14001 requirements
- Identify the role and nature of EMS
- Monitor and enhance EMS performance
- Determine environmental legal and regulatory compliance
- Distinguish EMS internal auditor as well as lead auditor
- Plan and conduct ISO 14001 audit
- Report the audit, and undertake audit follow-up activities

TARGET AUDIENCE

Anyone involved in designing, implementing, maintaining and improving an environmental management system. Also, anyone performing internal audits of an environmental management system, such as environmental care officers, managers and auditors.

ADNOC Technical Academy

COURSE 15

AUTHORIZED GAS TESTER

This course provides knowledge of Authorized Gas Testing. It enables learners to carry out tests for flammable & toxic gases as well as oxygen testing prior to hot-work and working in confined spaces.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Carry out gas tests for oxygen levels and, flammable & toxic gases.
- Carry out gas testing in confined spaces.
- Be aware of relevant confined space hazards.
- Carry out relevant legislative requirements including gas measuring, equipment monitoring and documentation of results.

TARGET AUDIENCE

This course covers the initial knowledge and assessment requirements for personnel to enable learners to work as Authorized Gas Testers.

ACCREDITING BODY

OPITO

DURATION

2 days

CERTIFICATION VALIDITY

3 years

COURSE 16

CONFINED SPACE

This course provides knowledge of confined space hazards, safe use of tools & equipment, hazard control and developing an emergency procedure. It is designed for workforce who access confined spaces. It covers safe work practices and procedures.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Identify what is a confined space
- Differentiate between different types of confined spaces
- Understand roles and responsibilities of supervisors, observers, entrants, and other personnel
- Identify hazards & controls in confined spaces
- Carry out working practices in a confined space
- Identify precautionary measures for confined space entry
- Follow monitoring methods, permits, certificates, exposure limits and ventilation
- Follow the risk management process
- Conduct an emergency response

TARGET AUDIENCE

Professionals who work as PTW authorities, site managers, engineers, supervisors, safety officers, confined space observers, supervisors, entrants, or gas testers.

COURSE 17

JOB SAFETY ANALYSIS

Job Safety Analysis (JSA) has become the main risk management principle for planning, management, and business operations. It is recognized as a proactive way of managing hazards and risks. It enables someone to control the identified hazard before it becomes the root cause of an accident. This course helps learners acquire skills and knowledge of the best way to develop JSA activities at workplace.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Identify hazards & risks and how they can be managed.
- Follow risk assessment process
- Identify types of hazards
- Identify types of control
- Identify JSA methodology
- Take roles and responsibilities
- Identify key elements of JSA
- Identify types & procedures of JSA.

TARGET AUDIENCE

Professionals who work as PTW authorities, site managers, engineers, supervisors, safety officers, confined space observers, supervisors, entrants, or gas testers.

COURSE 18

ADNOC WMS FULL PACKAGE

A Work Management System (WMS) is a safety tool that ensures work is properly controlled, coordinated, and communicated. It follows a holistic and robust approach to job safety analysis inclusive of a formal risk assessment, energy isolation, permit to work, temporary defeat and simultaneous operations. A permit to work (PTW) ensures that formal validation and authority are given when hazardous work is undertaken. It ensures that all components of a safe system of work are established before high-risk work commences. It also ensures risk to individuals and organization is controlled and reduced.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand WMS framework key aspects, requirements, and structure
- Understand roles and responsibilities of PTW authorities
- Recognize work under PTW and interface procedure
- Recognize types of permits and certificates
- Understand detailed process of PTW
- Participate in different levels of JSA preparation and requirements
- Identify the requirements of energy isolation standards
- Understand HSECES Temporary Defeat requirements and applicability
- Identify potential hazards and threats associated with concurrent operations (SIMOPS)

TARGET AUDIENCE

PTW authorities such as Asset Approval Authority (AAA), Area Authority, Permit Issuer, Permit Coordinator, Performing Authority and Job Performer.

COURSE 20

ADNOC WMS TEMPORARY DEFEAT TRAINING

This course provides the knowledge and skills required to perform Temporary Defeat of HSECES. It helps to understand the evaluation and mitigation of risk for all occurrences where HSE Critical Equipment & Systems (HSECES) are temporarily defeated. It ensures that such bypasses of HSECES are authorized, applied, monitored and removed in a correct and controlled manner.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand the ADNOC WMS standard for Temporary Defeat of HSECES.
- Understand the key people and their responsibility involved in Temporary Defeat.
- Understanding the requirements for Bypassing Critical Systems and Equipment
- Familiar with the Temporary Defeat related document formats.
- Understand the step-by-step procedure to generate Temporary Defeat Certificate
- Recognize the structure of temporary defeat framework.

TARGET AUDIENCE

People who will be involved in PTW and Temporary defeat of HSE Critical Equipment and System, like (Ex. Defeat Authority (DA), Defeat Performer (DP) Defeat Approvers, SIMOPS Coordinator (SC).

COURSE 21

ADNOC WMS SIMULTANEOUS OPERATIONS TRAINING

This course provides the knowledge and skills required to identify potential hazards and threats associated with concurrent operations. Learners will be able to evaluate the associated risks and establish means to control the operations, so such combined/cumulative risks of concurrent activities/operations are managed to a level that meets the principles of ALARP.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand ADNOC procedure for SIMOPS operation.
- Identify the meaning of simultaneous operations and the relevant risk.
- Understand the requirements for SIMOPS activates.
- Understand the roles and responsibilities of all parties involved in SIMOPs.
- Understand the requirements of SIMOPS plan and SIMPOS types.
- Understand the Key person's roles and responsibilities.
- Understand the SIMOPS tree analysis.
- Implement SIMOPs process.

TARGET AUDIENCE

Individuals who are involved in multitask supervision, area authority personal and SIMOPS coordinators.

COURSE 22

BANKSMAN & SIGNALER

This course provides necessary knowledge and skills to work safely and efficiently in directing crane, rigging and lifting operations. It is used to assess the vehicle movement in the work site, and to lead the vehicle in the safe access. It is used to inspect all lifting gears, and to understand the meaning of all signaling standards.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Ensure their maneuvers are secure, and not harming vehicles and other frameworks.
- Understand the usage of radio and hand gestures to communicate with equipment vehicle drivers.
- Understand the responsibility of safely guiding and moving vehicles on the work site.
- Identify the trouble spots where mobility would be difficult or dangerous.
- Monitor the movement of other machinery on the work site
- Ensure the signaling equipment is in good working order.
- Communicate by radio or phone during emergency.
- Identify escape routes during lifting operations

TARGET AUDIENCE

Drivers and flagman of the heavy vehicle in the area of lifting operation, emergency personnel and work people in the lifting operation vicinity.

COURSE 23

RIGGER/SLINGER TRAINING

This course provides the knowledge and skills of Rigging and slinging techniques in work site lifting operations. It trains learners on methods of slinging and signaling. Learners will be familiar with work equipment regulation (PUWER), lifting operation and lifting equipment regulation (LOLER). It enhances the ability to carry out basic risk assessment for slinging process. It covers necessary job knowledge required for the safe selection, examination of the lifting tackle, lifting techniques, signaling procedures a, and weight calculations. It ensures learner can tie the load for safe lifting by any form of lifting equipment using correct and clear signals.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Identify the hazards and risks associated with rigging and lifting operations
- Carry out a pre-use examination of lifting accessories
- Understand the communication procedure and give the right signal to the crane operator
- Understand the procedure of rigging principles, calculation rates of slings
- Understand how to assess the rigging equipment and plan a rigging activity
- Identify the correct rigging equipment and tackles
- Understand the legal duties, hooking up procedure and weight estimation
- Understand the environmental changes and pass signal to the crane operator.

TARGET AUDIENCE

Riggers, Rigging Supervisor, Crane operator, HSE personnel and other personnel involved directly/indirectly in a rigging operations.

COURSE 24

CRANE OPERATOR (MOBILE/OFFSHORE/OVERHEAD)

This course provides the knowledge and skills to work safely in crane operations. It covers mobile crane, and overhead crane operations. It enhances the operators' knowledge of the functioning area of various types of cranes in the industry.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Safely perform Crane Operations
- Effectively perform pre-inspection of crane
- Understand the lifting operations, Lifting Plan and load chart.
- Coordinate effectively with supervisor and riggers, banksman to safely perform the crane operations.
- Communicate the lift plan information to others involved in a lifting operations.
- Identify potential hazards and unsafe lifting practices using given lifting scenarios.
- Evaluate and explain how environmental factors affect the planned lifting operation.
- Report and explain positive and negative aspects of a typical lift to the appointed person.

TARGET AUDIENCE

Personnel performing crane operations.

COURSE 25

POWER WINCH OPERATOR

This course provides the necessary knowledge and skills of the correct and safe use of winch machines, specific to their typical tasks. It helps to acquire an understanding of towing and anchor handling winch operations.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Define HSE requirements applicable to the use of a recovery winch unit
- Describe the variations in winch construction electric/hydraulic
- Describe the types of winch ropes used in vehicle recovery and inspection and maintenance regimes
- Demonstrate how to use the different types of ancillary equipment used in winching operations
- Demonstrate how to calculate the resistances to winching in a practical manner
- Demonstrate hand signals to direct a winch operator and a casualty under the direction of a banksman
- Define the roles and responsibilities of winch operator

TARGET AUDIENCE

Anyone who uses or will be using a Winch Machine

ACCREDITING BODY

COURSE 26

MOBILE AERIAL PLATFORM (MAN LIFT OPERATOR)

This course provides the knowledge and skill to safely operate the mobile aerial work platform (Man Lift) as used in operations.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand the different types of MEWP
- Understand how to operate the MEWP
- Understand the hazards and risks in MEWP operations
- Demonstrate appropriate pre-use checks on an MEWP and complete a checklist
- Use the correct anchor point on an MEWP and don an appropriate safety harness
- Maneuver an MEWP safely – raising, lowering, traversing appropriately
- Understand the load limitation of MEWP
- Understand MEWP controls and features

TARGET AUDIENCE

Anyone who wants to get the knowledge and skills to safely operate mobile elevated work platforms in the workplace in accordance with UAE legislation.

COURSE 27

FORKLIFT OPERATOR

The aim of the forklift operator course is to ensure that learners are provided with sufficient knowledge and skills in order to operate the forklift a safe and competent manner.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Apply basic knowledge on forklift safety
- Perform Pre-inspection of forklift Equipment.
- Understand the lifting procedure, forklift components and functions.
- Coordinate effectively with the supervisor and co-workers.
- Communicate properly with the signal man.
- Understand the job-related activities while moving in and around the area.
- Taking care of the side structures and Pedestrians.
- Follow the given method statement and load chart.

TARGET AUDIENCE

Anyone who requires the knowledge and skills to safely operate the forklift in the workplace in accordance with UAE legislation.

ACCREDITING BODY

ADNOC

COURSE 28

CERTIFIED SCAFFOLDER (FOR ERECTORS)

This course helps to get knowledge and skills of scaffolding to minimize the risk of accidents. It covers methods of safe erection and dismantling of basic scaffolds.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Specify the general requirements for erection and inspection of frame, tube & clamp and system scaffolding.
- Determine safety rules and steps associated with the erection of frame, tube & clamp and system scaffolding.
- Identify existing and predictable hazards and eliminate them.
- Inspect scaffolds before and after each work shift and identify major items to consider .
- Supervise if a scaffold is assembled, changed, moved or taken apart.

TARGET AUDIENCE

Anyone who is involved in the scaffolding erection and dismantling.

COURSE 29

CERTIFIED SCAFFOLDING INSPECTORS

This course covers basic scaffolding structures and requirements for safe work practice of scaffolding. It provides necessary knowledge and skills to inspect structures effectively. Learners will be competent to inspect and complete reports on scaffolds in the workplace.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Specify the General Requirements for the erection and inspection of scaffold.
- Identify workplace hazards and implement appropriate control measures
- Determine the specific safety rules and steps associated with the erection of scaffold.
- Identify the major items to consider when performing a scaffold inspection.
- Conduct inspections of scaffolding gear/equipment before and after use, and repairing if necessary
- Specify the Major Elements of OSHA's Regulation 29 CFR Subpart L – Scaffolding

TARGET AUDIENCE

Scaffolder wishing to expand their knowledge of scaffold inspection.
Anyone who is responsible for carrying out statutory scaffold inspection in accordance with work-at-height regulations.

ACCREDITING BODY

ECITB/CISRS/STI

DURATION

3 days

[Return to Course Summary](#)

COURSE 30

CERTIFIED SCAFFOLDING SUPERVISOR/FOREMAN

This course provides knowledge and skills to supervise, monitor, direct and instruct scaffolders for scaffolding operations.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Apply best practice & industry standards .
- Follow HSE requirements of scaffolding
- Evaluate the hazards in overall assessment process
- Be knowledgeable in regulatory requirements
- Demonstrate design appreciation.
- Plan and organize materials and logistics.
- Enhance competence and allocate duties.
- Supervise effectively.
- Establish commissioning and handover.
- Demonstrate scaffold inspections and inspection practices.
- Develop effective communication

TARGET AUDIENCE

Personnel who are responsible for the supervision, direction and instruction of scaffolding operations such as: chargehands, foreman, supervisors, contract supervisors and management.

COURSE 31

LIFTING OPERATIONS FOR APPOINTED PERSON(OFFSHORE/MOBILE CRANE)

This course provides knowledge, and skills to understand the roles and responsibilities when planning lifting operations, as per current legislation and with compliance of BS 7121.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Lead a team of lifting supervisors, riggers and operators and monitor their performance
- To have a detailed understanding of lifting operation and lifting equipment
- Gain the knowledge and skills to implement safe systems of work for lifting operations
- Understand regulatory requirements
- Explain duties of personnel involved in a Lifting Operation
- Gain the knowledge on lifting accessories, types, pre-use, safe use & selection
- Implement an optimal rigging plan with effective selection of lifting equipment.
- Prepare a lifting plan with risk assessment and method statement
- Supervise lifting operations safely as per lifting plan
- Confidently stop the lifting operations if found unsafe

TARGET AUDIENCE

Personnel working in the field of lifting operations at supervisory and management levels.

ACCREDITING BODY

LEEA

DURATION

4 days

CERTIFICATION VALIDITY

3 years

COURSE 32

LIFTING SUPERVISOR

This course provides the knowledge and skills to understand the roles and responsibilities of lifting supervisor. It enables learners to supervise safe rigging and slinging activity in accordance with the lifting plan prepared by the certified appointed person for lifting operations.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Perform Inspection, Testing and Certification processes and frequency
- Gain understanding of the legal provisions concerning lifting operation.
- Gain knowledge on Storage of lifting equipment
- Perform Auditing and Review of lifting activities
- Carry out Registration and Marking.
- Understand the use of Lifting Tackle and Lifting Machines.
- Implement a lifting plan based on the method statement
- Perform an examination of Chains, Ropes, Lifting Tackle, and Lifting Machines
- Effectively carry out duty as a competent lifting supervisor

TARGET AUDIENCE

Personnel working in the field of lifting operations and anyone who wants to become a lifting supervisor.

COURSE 33

HAZARD COMMUNICATION PROGRAM + CHEMICAL SAFETY

This course provides standardized requirements for communicating all identified chemical hazards at workplace to protect people from injuries and illnesses associated with those hazards.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand the nature of the hazards and their effects on the human body with respect to chemical exposure;
- Understand material safety data sheets & hazards of different chemicals
- Understand the Transport, Use, Storage, and Disposal of hazardous substances
- Evaluate risks health hazards in the working environment with respect to chemical exposure;
- Control the risks to As Low as Reasonably Practicable (ALARP);
- Describe the rights under OSHA's Hazcom standard.
- Identify the GHS label symbols and explain the meaning of each.
- State different ways to find information about chemicals.
- Learn the emergency response in case of a chemical incident and spillage
- identify chemicals from labels

TARGET AUDIENCE

All personnel including workers, consumers, transport workers and emergency responders, and personnel responsible for transport, use, storage, and disposal of hazardous substances.

COURSE 34

PERSONAL PROTECTIVE EQUIPMENT (PPE)

When hazards of work environment cannot be 'engineered out', or when guards, shields and other safety devices have limited effectiveness, there will often be a need to wear personal protective equipment (PPE). This training covers the proper use of PPE that effectively guards health and safety of personnel from workplace hazards. It lays out the standards for selection, proper use, storage, maintenance and replacement of PPE.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Define PPE
- Identify types of PPE
- Understand limitations of PPE
- Decide when PPE is necessary
- Demonstrate how to put on, adjust, and take off PPE
- Select, use and maintain PPE
- Demonstrate how to inspect equipment for damage or wear
- Demonstrate the use of PPE (EEBA, full & half face masks, and full body harness).

TARGET AUDIENCE

This course is designed for professionals who are required to wear personal protective equipment (PPE). It is suitable for induction or to reinforce the need to wear PPE.

COURSE 35

OPITO FAST RESCUE CRAFT (FRC) COXSWAIN

This course provides the initial emergency response training required for the role of an Emergency Response and Rescue Vessel (ERRV) Crew Fast Rescue Craft (FRC) Coxswain.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Launch and release an FRC
- Prepare an FRC
- Recover an FRC
- Rescue and recover a casualty from an FRC
- Right a capsized FRC

TARGET AUDIENCE

Anyone who intends to work in the role of Fast Rescue Craft Coxswain aboard an Emergency Response and Rescue Vessel (ERRV) and should be an existing FRC boatman.

ACCREDITING BODY

OPITO

DURATION

2 days

COURSE 36

PROFICIENCY IN FAST RESCUE BOAT

This course provides the knowledge and skills to safely crew an FRB. It helps learners to operate fast rescue boats onboard vessels.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Take responsibility during the launching and operating of the fast rescue boat
- Carry out rescue operations.
- Follow safety precautions and equipment.
- Practice various search patterns.
- Operate the boat on open water, influences of currents, wind and waves.
- Deal with a drowning person.
- Tow with the fast rescue boat.
- Handle means of communication and emergency beacons.

TARGET AUDIENCE

Crew members on board ships who may function as FRB crew.

COURSE 37

CARRIAGE OF DANGEROUS HAZARDOUS AND HARMFUL CARGOES

This course provides the knowledge and skills of preparation and execution of the safe carriage of dangerous goods and maritime pollutants by sea. Learners will understand the legal implications and correctly apply or verify compliance with the IMDG Code and its supplements.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Classify dangerous goods and identify PSN (Proper Shipping Name).
- Understand how to pack dangerous goods in packages.
- Establish effective procedures for the classification and documentation of dangerous goods
- Mark, label or placard the dangerous goods.
- Prepare transport documents for dangerous goods.
- Understand how to reduce damage, injury and loss during handling, transport operations, safeguarding people, cargo, equipment and property.
- Practice the correct way of preparing dangerous goods for transport.
- Identify best techniques for loading /unloading dangerous goods into/from ships.
- Ensure that the correct safety marks are applied to suitable means of containment
- Understand and describe emergency response procedures

TARGET AUDIENCE

Persons responsible for the transport, use, storage, and disposal of dangerous or hazardous substances and cargo handling responsibilities

ACCREDITING BODY

STCW

COURSE 38

DANGEROUS GOODS REGULATIONS CAT 8

This course provides the knowledge and skills for the requirements of Dangerous Goods standards. It covers the latest information on limitations, packaging, labeling, accident and incident reporting, and emergency procedures.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Identify and classify dangerous goods
- Have knowledge of the origin of the current regulations and general philosophy
- Identify the classes of dangerous goods
- Identify the hazard/handling labels applicable to dangerous goods
- Recognize dangerous goods hazard/handling labels
- Recognize package use and package specification markings
- Recognize the documentation used for the transport of dangerous goods
- Identify potential hidden hazards in cargo
- Be aware of loading and storage procedures
- Observe the provisions for dangerous goods in the baggage of passengers and crew
- Follow basic dangerous goods emergency response procedures

TARGET AUDIENCE

Flight crew members, load masters and load planners, flight operations officers and flight dispatchers, airlines training specialists, ramp and warehouse personnel and cargo staff.

COURSE 39

AVIATION SECURITY AWARENESS LEVEL

This course provides awareness on the importance of staying vigilant against attempts of acts of unlawful interference. It also provides examples of practices you can apply in your workplace to identify and prevent potential security threats.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- List the threats to civil aviation
- Identify the components of an improvised explosive device & action to be taken if a suspicious item is found
- State the various restricted zones in the airport and their contribution towards crime prevention in the airport
- Discuss the types of threats to consider in a security risk assessment
- Recognize the steps for enforcing security in your work areas
- Explain the role of human factors in maintaining security

TARGET AUDIENCE

All employees who are working for civil aviation authority, airport operators, aircraft operators; Personnel who have unescorted access to an aircraft; Personnel who are working in security restricted area of the airport; Personnel who are working in non-security restricted area of the airport; Personnel who are frequently in non-security restricted area of the airport.

COURSE 40

HELICOPTER LANDING OFFICER (HLO)

This course provides the knowledge, skills, and attitude within the areas of helicopter handling offshore. Learners will understand the duties and responsibility areas which will rest with HLO. It covers the helideck, its operation and daily task of HLO. It provides knowledge about the different responsible areas and job function of the helideck.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Operate the firefighting equipment, rescue materials, and PPE.
- Perform duties of HLO on an offshore installation.
- Operate as a HLO under normal conditions, and in emergency.
- Recognize alarm in case of accidents at the helideck, landing or start of the helicopter
- Understand the preparation of the helideck and report the readiness to the helicopter before landing
- Understand the special activities at the helideck. describe helideck regulations and guidelines.

TARGET AUDIENCE

This training course is for all staff who are willing to work as a HLO, and for those who are already certifies and need to improve their knowledge and skills about HLO.

COURSE 41

HELIDECK ASSISTANT (HDA)

This course provides the knowledge and skills on how to work alongside the helicopter landing officer to make sure helicopters safely land and take off from offshore facilities.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Fully understand the role and responsibilities of an HDA
- Respond to a variety of helideck firefighting and non-firefighting emergency scenarios in a training environment
- Assist the helicopter landing officer
- Perform a fixed routine of helideck operations such as maintenance and testing of helideck systems and equipment.
- Demonstrate passenger embarkation and disembarkation, ensuring freight and passenger baggage are handled safely to and from the helicopter.
- Recognize emergency and plays an important role as an emergency response team member.

TARGET AUDIENCE

Anyone appointed as potential Offshore Helideck Assistants (HDAs).

COURSE 42

HELIDECK OPERATIONS INITIAL TRAINING STANDARD

This course provides the initial knowledge and skills to perform the roles of Offshore Helicopter Landing Officer (HLO) and Offshore Helideck Assistant (HDA) safely and effectively.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand the key areas of helideck operations, regulations and guidelines
- Recognize the helideck's physical characteristics and obstacle-free requirements
- Know the helideck equipment and systems
- Understand and describe meteorological requirements for offshore helideck operations
- Understand the typical hazards associated with offshore helideck operations
- Understand with the roles and key responsibilities of the Offshore HLO and HAD
- Ensure proper communication checks, helideck equipment status, safety nets, security and stowage of helideck equipment, wearing of appropriate PPE during helicopter operations.
- Ensure helideck team are in required locations during helicopter operations.
- Conduct and respond to required helideck protocols during helicopter operations,
- Identify dangerous goods during helicopter loading and unloading
- Comply with helideck protocols and procedures during helicopter operations
- Comply with helicopter danger areas rules.

TARGET AUDIENCE

Anyone appointed to the role of an Offshore Helicopter Landing Officer (HLO) and/or Offshore Helideck Assistant (HDA).

DEFENSIVE DRIVING (FOR NON- PROFESSIONAL DRIVERS)

This course provides the knowledge and skills for controlling health and safety risks associated with road transport activities. Learners will understand road transport safety policies, management elements and operational criteria with the intention to prevent incidents involving road transportation.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- practice defensive driving techniques
- Understand the basic requirements for driving
- understand safety procedures and protocols for ADNOC against driving rules.
- Recognize the importance of effective implementation of journey management.
- Understand the safe use of survival equipment
- Understand the proper use of safe systems in a vehicle and the adverse effect of not using them properly

TARGET AUDIENCE

Anyone involved in driving for ADNOC site locations and business.

INTERNATIONAL SHIP AND PORTS SECURITY ISPS

This course provides a detailed overview of the International Ship and Port Security (ISPS) Code including its role in emergency situations.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Explain the importance of the shipping industry and the role of the International Maritime Organization (IMO)
- Identify the aims of the ISPS Code and to whom it applies
- Identify common threats to maritime security and their costs
- Identify the roles that are responsible for ship security levels
- Describe features of competent security teams
- Describe the structure of the ISPS Code
- Describe the three security levels within the ISPS Code
- Describe the purpose of a Declaration of Security
- Describe the structure and purpose of a ships plan and assessment
- Describe the importance and purpose of an International Ship Security Certificate
- Describe the process for reporting incidents and threats
- Identify the records that are required to be kept

TARGET AUDIENCE

Anyone responsible for port, vessel, or offshore installations.

ENVIRONMENTAL STANDARDS MONITORING & REPORTING

This course provides the knowledge and skills to establish the requirements for systematic collection and reporting on environmental performance.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Understand the procedure to conduct environmental monitoring
- Communicate pollutant loading and regulatory compliance
- Identify monitoring methods
- Report environmental compliance as per frequencies
- Gain knowledge on pollution prevention and control process requirements
- Prepare a pollution prevention control compliance report
- Understand different types of environmental aspects and their environmental impacts
- Understand the requirements of the environmental management standard ISO 14001:2015
- Develop and implementation of an Environmental Management System (EMS)
- Identify all the waste stream types and, the opportunities for recycling of waste and land rehabilitation

TARGET AUDIENCE

Employees at all levels of the organization including managers, and team leaders, supervisors, maintenance engineers, risk specialists, safety and environmental personnel.

WASTE MANAGEMENT (HAZARDOUS AND NON-HAZARDOUS)

This course provides the knowledge and skills about effective waste management. Learners will be able to minimize potential adverse impacts on the environment and to protect people from exposure to hazardous substances.

LEARNING OUTCOMES:

Upon the completion of this course, learners will be able to:

- Explain the different types of waste and how they must be controlled/managed.
- Establish the requirement for waste inventories.
- Develop waste management strategies, based on the principle of hierarchical control
- Establish requirements for a duty of care.
- Address past practices and corrective action.
- Comply with environmental, safety and welfare legislation and policies
- Gain knowledge on international shipment of waste

TARGET AUDIENCE

- HSE Professionals
- Personnel responsible for managing hazardous wastes
- Emergency Personnel.
- Anyone who wishes to learn how to reduce risk and liability arising from polluting events
